Summary

Full Stack Developer with nearly 8 months of experience building web applications and AI-powered automation systems using React.js, Node.js, Python, JavaScript, and TypeScript. Experienced in full-stack development, web scraping, mobile and web automation, and AI integration across automation, fintech, and e-commerce use cases. Focused on building practical, production-ready solutions and collaborating effectively in project-driven teams

Education

University Of Central Punjab Lahore **Oct 2022 - Jul 2026**

Bachelor of Science in Computer Science

Experience

BitBash **January 2026 – Present**

Junior Software Engineer *Lahore, Pakistan*

- Build and maintain full-stack web applications using React.js, Node.js, JavaScript, TypeScript, Python, Firebase, and Supabase.
- Develop AI-powered automation workflows, including web scraping, mobile automation, and process-automation tooling.
- Contribute to production client projects across automation, e-commerce, monitoring, and engagement-focused platforms.
- Work closely with the development team to implement features, integrate services, troubleshoot issues, and deliver production-ready updates.

Pakistan Railways **July 2025 – Sep 2025**

Software Engineer Intern *Lahore, Pakistan*

- Developed a Flutter mobile application for the Pakistan Railways Complaint Management System, enabling passengers to register and track complaints.
- Built supporting admin functionality for staff to manage and resolve complaints and integrated the application with the Rabta app.
- Collaborated with the IT department on deployment and optimization of the complaint-management solution.

Projects

ShopSlayer.ai | *Brand & Affiliate Automation Platform*

- Contributed to a web-based brand and affiliate automation platform using React.js and Node.js.
- Worked on full-stack product functionality within a production client environment and supported feature delivery across the platform.

Upwork Automation | *Web Automation Tooling*

- Built a custom automation tool for Upwork to collect and organize relevant job listings based on defined search criteria.
- Automated repetitive parts of the job search process, including job tracking, filtering, and proposal workflow management.
- Added logic to process job details and keep useful opportunities organized, reducing the manual work required when reviewing multiple listings.
- Worked with browser-based automation and Upwork workflows while handling dynamic page content and repeated actions.

Crypto Sentry| *Crypto Monitoring & Alerts*

- Built a web-based crypto monitoring tool to track market activity, price movements, and selected cryptocurrencies in one place.
- Added configurable alerts to notify users when tracked assets reach specific price levels or market conditions.
- Worked with live market data to keep prices and asset information updated without requiring manual checks.

- Designed the monitoring flow around quick access to important market changes and timely alerts.

One Week With CEO | | *Web Platform*

- Built a web platform where users can access CEO-focused content and interact with the product through a structured online experience.
- Developed the main user flows, content pages, and interactive features across the platform.
- Worked on both frontend functionality and backend integration to make sure user actions and platform data worked correctly together.
- Built responsive pages for a consistent experience across desktop and mobile devices.

Spotify Automation| *Mobile App Pilot*

- Built a Python-based mobile automation tool for handling repeated Spotify app workflows with minimal manual input.
- Automated in-app actions and navigation to test how multi-step Spotify tasks could be completed programmatically.
- Added control logic to manage different steps of the workflow and handle changes during execution.
- Tested the automation across repeated runs and adjusted timing and interaction handling to improve consistency.

Telegram Automation | *Web*

- Built web automation and scraping workflows connected with Telegram for collecting and delivering data automatically.
- Developed scripts to extract required information from web sources, process it, and send the results through Telegram.
- Added automated triggers and message handling to run specific workflows based on user requests or incoming events.
- Handled changing web content, data formatting, and error cases to keep the automation working across repeated runs.

Skills

Backend Frameworks: Laravel, NestJS, Node.js, Express.js
Languages: PHP, JavaScript , C++ , Typescript
APIs & Real-Time: REST APIs, WebSockets, Pusher, Laravel Reverb
Databases: PostgreSQL, MySQL, Query Optimization, Migrations , Supabase
Caching & Messaging: Redis, Queues, Horizon, Event Broadcasting, Cron Jobs
DevOps & Tools: Docker, Git, GitHub, CI/CD Basics
Cloud & Storage: S3-compatible Storage, AWS Basics
Frontend: HTML, CSS, ReactJs
